Dear Angus,

A huge thank you to all those who visited our stand and attended the seminars at last week's Nemex show where there was standing room only at the 'Cutting Waste at Source' presentation by CEO Angus Robertson. The bank holiday provided the extra recovery time the pP team needed after the unprecedented interest in the technology and the subsequent demand for site evaluations, powerPerfactor has come of age and going mainstream.

Be assured if you left your details and haven't heard from one of the team yet, you will soon.

REGENT INNS set to powerPerfect 35 sites

As the music pulsates and the ice cold beer slips down a treat, unbeknown to you, you may be experiencing a greener/cleaner night out.

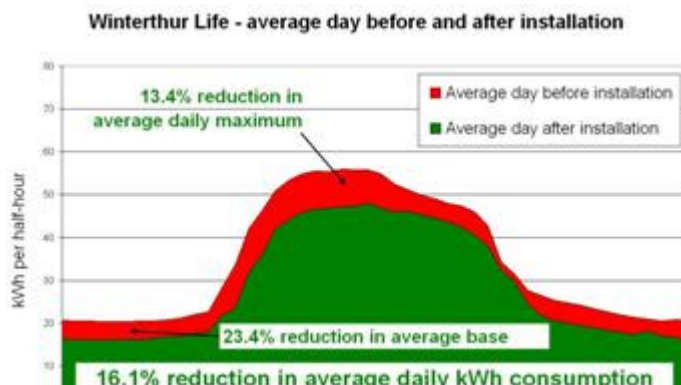

Regent Inns, the dynamic group behind Walkabout, Jongleurs and Bar Risa are powerPerfecting sites all over the UK

ensuring that keeping the beer and the customers cool is achieved as efficiently as possible.

The first of 35 sites to be powerPerfected are already cutting electricity consumption/costs and carbon emissions.

We look forward to reporting the results as they become available.

WINTERTHUR daily consumption down by 16.1%

A 420kVA powerPerfactor with a 9% optimisation setting was installed at Winterthur Life, Basingstoke, on 11th February 2007.

Optimising voltage by 9% ordinarily yields a 14.5% reduction in average electricity consumption. As shown in the chart, average daily consumption for the period since the powerPerfactor was installed has been reduced by 16%. and a 23% drop in the base load.

As if School Head's and Governor's do not have enough to do, they are now to become their own energy/carbon experts. I can't believe that this is the way forward, how many straws does it take to break a camel's back?
