

**powerPerfector**

### **powerPerfector Performance Guarantee**

You will have reviewed many of our case studies before committing to buy *powerPerfector* and you will see that savings levels vary even at the same optimisation level, this is because different equipment will show different savings levels after an installation.

The “estimated” savings level/ROI in your cost/value pages does not take into account the additional financial benefits from a *powerPerfector* installation that come from; longer equipment life, reduced maintenance costs and reduced capacity charges. Nor does it quantify the value of increased security to your infra-structure. We ask you to take these into account and reference them if, because you have an untypical load, the actual savings figures are below those estimated to you.

Notwithstanding this – no one should buy an energy saving technology without some core performance guarantee - so for your peace of mind, on your first installation, we guarantee that the actual savings level will be above 80% of the estimated figure quoted to you on your final cost/value page. In the unlikely event that it is below that figure we will rebate such monies as necessary to restore the 80% of savings/ROI figure.
